In The Claims

1. (Amended) A method for depositing an inter-metal-dielectric (IMD) layer on a semiconductor substrate by plasma chemical vapor deposition (CVD) comprising the steps of:

providing a pre-processed semiconductor substrate;

positioning said semiconductor substrate in a plasma CVD

chamber;

heating said semiconductor substrate in said chamber to a temperature of at least 300°C between 300°C and 400°C for a length of time sufficient to outgas a surface of said semiconductor substrate; and

conducting a plasma CVD process on said semiconductor substrate and depositing said inter-metal-dielectric layer.

2. (Amended) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said semiconductor substrate is preferably heated to a temperature at least 350°C between 350°C and 400°C during said heating step.

- 3. (Amended) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said semiconductor substrate being heated to a temperature of at least 300°C for a time period of at least 30 sec.
- 4. (Amended) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said semiconductor substrate being heated to a temperature preferably of at least 350°C for a time period of at least 1 min.
- 5. (Original) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said method prevents said deposited inter-metal-dielectric layer from cracking due to outgassing from said semiconductor substrate.
- 6. (Original) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said inter-metal-dielectric (IMD) layer deposited is silicon oxide.

- 7. (Original) A method for depositing an inter-metal-dielectric layer according to claim 1 further comprising the step of flowing a precursor gas of silane into said plasma CVD chamber for depositing said IMD layer.
- 8. (Original) A method for depositing an inter-metal-dielectric layer according to claim 1 further comprising the step of flowing precursor gases of silane and nitrous oxide into said plasma CVD chamber for depositing said IMD layer.
- 9. (Original) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said semiconductor substrate is heated to a temperature of 400°C for 1 min.
- 10. (Original) A method for depositing an inter-metal-dielectric layer according to claim 1, wherein said heating step and said depositing step are conducted in the same plasma CVD chamber.

11. (Amended) A method for depositing an oxide layer on a semiconductor wafer comprising the steps of:

positioning a pre-processed semiconductor wafer in a plasma process chamber;

heat-treating said semiconductor wafer at a temperature of at least 350°C between 300°C and 400°C for a length of time sufficient to outgas said wafer; and

depositing a silicon oxide layer on said wafer by a plasma enhanced chemical vapor deposition technique.

- 12. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of positioning a pre-processed silicon wafer in said plasma process chamber.
- 13. (Amended) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of heat-treating said semiconductor wafer at a temperature of at least 350°C for a time period of at least 30 sec.

14. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of heat-treating said semiconductor wafer at 400°C for 1 min.

Don

- 15. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of evacuating said plasma process chamber prior to said depositing step to a pressure of not higher than 10^{-2} Torr.
- 16. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of cleaning a surface of said semiconductor wafer by a nitrous oxide (N_2O) plasma.
- 17. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of flowing a precursor gas of silane into said plasma process chamber to carry out said deposition process.

18. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of flowing precursor gases of silane and nitrous oxide into said plasma process chamber to carry out said deposition process.

- 19. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of depositing said silicon oxide layer as an inter-metal-dielectric layer.
- 20. (Original) A method for depositing an oxide layer on a semiconductor wafer according to claim 11 further comprising the step of outgassing moisture from said semiconductor wafer during said heat-treating step.
